SUMMARY

Software Engineer with experience across fintech SaaS, enterprise microservices, and AI/LLM tooling. Took end-to-end ownership of a production fintech application (Go/Gin, NextJS, PostgreSQL), architecting 150+ REST APIs and shipping automated ITR features at scale. Background in Spring Boot/Kafka microservices at IBM. Strong technical foundation across backend architecture, API integrations, and AI-driven workflow automation.

KEY SKILLS

Language: Java · Go · C++ · SQL (PostgreSQL, MongoDB) · JavaScript · HTML/CSS · Python | **Framework:** Spring Boot · Gin (Go) · NextJS · React
Testing & DevOps: JUnit · AWS · Kubernetes · Docker · Kafka · Redis | **AI/LLM:** AI Workflow Automation · MCP Integrations · Multimodal AI
Tools & Practices: Jira · Code rabbit · Git/GitHub · Agile Development · Bug Tracking Tools · Grafana (Ioki & prometheus) · Confluence · Husky

AI-DRIVEN PROJECT

- Receipt-to-Sheets AI Orchestrator: Architected a Go microservice intercepting WhatsApp webhooks and a Python FastAPI vision engine (Llama 4) for automated, high-accuracy receipt-to-spreadsheet financial tracking at a very low cost which act as a whatsapp accountant for businesses.

EXPERIENCE

Founding Software Engineer · WFYI Technology | Gurugram Oct 2025 – August 2026

- Engineered the end-to-end architecture for Fyfliflix, a live tax and financial platform serving ~**17,000** active users internationally and processing over **126,000** events. Shipped comprehensive ITR filing automations, integrating API workflows with Surepass for tax reporting and compliance.
- Centralized Identity and Access Management (IAM):** A complete and common authentication platform for 3 verticals featuring Google OAuth, OTP login via MSG91, JWT session management, and a robust Role-Based Access Control (RBAC) system supporting 6 types of admin hierarchy.
- Created an AI-powered GST invoice parser using **Python, FastAPI, and Llama-4-Scout (via DeepInfra API)**, automating data extraction from mixed formats (PDFs, Images, DOCX) into structured CSV registers with automated GST math validation, reducing manual data entry by **60%**.
- Implemented a headless CMS setting up a local WordPress IDE that **boosted organic search visibility by 200%+**, and automated N8N lead pipelines to **reduce manual processing time by 70%**. The headless architecture helped with better performance and faster development.
- Automated workflows by building robust API integrations with HubSpot CRM and Google workspace to improve funnel visibility for sales leads.
- Implemented omnichannel user communication: Delivered an integrated notification stack supporting Gmail SMTP using Resend, WhatsApp template integration, and internal dashboard alerts (notification service) behind a unified sender interface resulting in real-time user updates.
- Built dynamic, data-driven web pages by integrating RESTful API contracts and implementing robust state management, alongside designing intuitive UI layouts, Keyframe animations with tech stack HTML, CSS, JavaScript, TypeScript using NextJS and React framework.

Software Engineer · IBM | Bengaluru June 2024 – Oct 2025

- Built an event-driven messaging system with Java, Spring Boot, Kafka, MongoDB, AWS for 100K+ active users with 99.9% uptime for client.
- Managed the entire lifecycle of production bug incidents in ServiceNow, engaging directly with clients to identify root causes and independently resolving more than **20%** of the issues if the bug belongs to my domain and re-assigning if it is out of my domain.
- Fortified reliability via rigorous JUnit testing, dropping critical production bugs to **near-zero** and cutting QA regression by **15 hours** per release.
- Standardized Jira workflows and Confluence documentation, reducing developer onboarding time by **50%** and improving sprint velocity by **20%**.

Prompt Engineer · Scale AI | Remote Aug 2023 – Apr 2024

- Optimized LLMs through Reinforcement Learning through RLHF on 500+ coding-related prompts across C++, Java, HTML, CSS, and JavaScript.
- Architected 300+ edge-case prompts to rigorously test LLM reasoning in enterprise software contexts, while simultaneously scoring 1,200+ generated outputs against coding best practices, syntax validity, and algorithmic complexity. This comprehensive 3-month fine-tuning initiative drove an 18% improvement in code-generation accuracy, boosted the debugging success rate by 35%, and reduced code hallucinations by 22%.

EDUCATION

Bharati Vidyapeeth College of Engineering Aug 2020 – May 2024

BTech in Computer Science · CGPA: 9.3

CERTIFICATES AND COURSES

- AWS Certified Cloud Practitioner** — Amazon Web Services (AWS), Credential ID 59d7371ccc054a42acfce654900499a8
- Microsoft Azure Fundamentals (AZ-900)** — Microsoft Azure, Credential ID 835DC9182B3E21A4
- IBM Databases and SQL: MySQL** — IBM, Credential ID WUK8GXYWPC4P
